In Codeforces, Codechef, and Atcoder contests happens every week. Do i need to participate in all 3 or best of 2

It depends on your goals. If you want **maximum practice and rating improvement**, all three are ideal. But if time is a constraint, **best of 2** (Codeforces + either Codechef or Atcoder) is a balanced approach.

- **Codeforces**: Must-do, most competitive.
- **Codechef**: Good for long challenges and cook-offs.
- **Atcoder**: Strong problem quality, good for fast thinking.

Pick based on your weak areas and availability! 🚀

Which would you prefer codechef or atcoder

Atcoder is better if you want:

- High-quality, well-structured problems.
- A stronger focus on algorithmic thinking.
- Faster improvement in problem-solving speed.

Codechef is better if you want:

- A mix of long and short contests.
- More exposure to tricky, implementation-heavy problems.
- A challenge-based learning approach.

Verdict: **Atcoder** is generally better for pure competitive programming growth. If you enjoy long challenges, add Codechef occasionally. 🚀
